Modules

```
import { NgModule } from '@angular/core';
import { BrowserModule } from '@angular/platform-browser';

@NgModule({
  imports:      [ BrowserModule ],
  providers:    [ Logger ],
  declarations: [ AppComponent ],
  exports:      [ AppComponent ],
  bootstrap:    [ AppComponent ]
})

export class AppModule { }
```

Types of Feature Modules

NgModule	Declarations	Providers	Exports	Imported by
Domain	Yes	Rare	Top component	Another domain, AppModule
Routed	Yes	Rare	No	None
Routing	No	Yes (Guards)	RouterModule	Another domain (for routing)
Service	No	Yes	No	AppModule
Widget	Yes	Rare	Yes	Another domain
Shared	Yes	No	Yes	Another domain

Frequently Used NgModules

`BrowserModule`	`@angular/platform-browser`	When you want to run your app in a browser
`CommonModule`	`@angular/common`	When you want to use `NgIf`, `NgFor`
`FormsModule`	`@angular/forms`	When you want to build template driven forms
`ReactiveFormsModule`	`@angular/forms`	When you want to build reactive forms
`RouterModule`	`@angular/router`	When you want to use `RouterLink`
`HttpClientModule`	`@angular/common/http`	When you want to talk to a server

Modules Flow

run → main.ts → configure → app.module.ts → bootstrap → app.component.ts

app.component.ts → template → app.component.html

app.module.ts → display → index.html

index.html ← render ← app.component.html

AlmavivA

Lazy-loading

```
const routes: Routes = [
    {
        path: '',
        pathMatch: 'full',
        redirectTo: AppRoutings.heroList,
    },
    {
        path: AppRoutings.heroList,
        loadChildren: () => import('./hero-list/hero-list.module').then(res => res.HeroListModule)
    }
];

@NgModule({
    imports: [RouterModule.forRoot(routes, { preloadingStrategy: PreloadAllModules })],
    exports: [RouterModule]
})
export class AppRoutingModule { }
```
